InterView Questions

⭐ 1️⃣ Tell Me About Yourself

Good morning/afternoon Sir/Madam,

My name is Hritik Maurya. I have completed my Bachelor of Science in Information Technology from Mumbai University.

Currently, I am working as a SQL Developer at Uni Design Jewellery Pvt. Ltd. In my role, I manage and maintain business data related to sales, inventory, and vendors using MS SQL Server. I regularly write optimized SQL queries, complex joins, and stored procedures to ensure efficient data processing. I also generate MIS and analytical reports that help management make data-driven business decisions.

I have knowledge of MySQL and PostgreSQL, along with basic experience in Python and Power BI for data analysis and visualization.

Earlier, I worked on MERN stack projects during my internships, which helped me understand backend logic, database integration, and full-stack development concepts.

I am passionate about databases, query optimization, and solving real-world business problems using data. I am always eager to learn and improve my technical skills.

☑️ 2️⃣ Explain Your Current Role

“In my current role as a SQL Developer at Uni Design Jewellery, I am responsible for managing and analyzing jewellery business data.

My daily tasks include:

- Writing complex SQL queries and joins to extract business data.
- Creating stored procedures for automation.
- Generating MIS and analytical reports.
- Optimizing queries for better performance.
- Supporting internal teams with accurate data for decision-making.

I also work closely with different departments to understand their reporting requirements and translate them into structured database queries.”

☑ 3 Why Did You Move from Web Development to SQL?

“I started my career learning web development through internships and projects using the MERN stack. However, during my training and practical exposure, I realized I have a strong interest in databases and data analysis.

I enjoy working with structured data, writing optimized queries, solving performance issues, and generating business insights. That’s why I decided to focus more on SQL and database technologies, and currently I am building my career as a SQL Developer.”

☑ 4 What Are Your Strengths?

“My key strengths are:

- Strong understanding of SQL concepts including joins, subqueries, stored procedures, and indexing.
- Ability to optimize slow queries.
- Analytical thinking and attention to detail.
- Quick learner with continuous improvement mindset.
- Good team collaboration and communication skills.”

Weakness

“One of my weaknesses earlier was that I used to spend too much time perfecting queries. I always wanted to optimize them fully before sharing, which sometimes delayed delivery slightly.

However, over time I learned to balance optimization with deadlines. Now I first ensure the solution meets business requirements on time, and then improve performance if needed.”

☑ 5 What Is Your Biggest Achievement?

“One of my key achievements is generating optimized MIS reports that helped management track sales and inventory more efficiently.

Additionally, I was in the Top 10% in a coding contest with over 500 participants and also won an IT Quiz competition, which reflects my technical interest and problem-solving ability.”

☑ 6 Explain One Project (iNoteBook Project – If Asked)

“One of my key projects is iNoteBook, which is a full-stack application built using React.js, Node.js, and MongoDB.

The application allows users to:

- Register and login securely.
- Create, update, and delete notes.
- Store notes securely in the backend.

I implemented JWT authentication for secure login and created REST APIs using Node.js and Express. This project helped me understand backend logic, database structure, and API integration.”

☑ 8 Why Should We Hire You?

“You should hire me because I have practical experience working with real business data in MS SQL Server. I understand how databases support business operations, not just theory.

I am hardworking, technically strong in SQL, and always willing to learn new technologies. I can add value by writing efficient queries, generating accurate reports, and improving database performance.”

☑ “Why do you want to switch your job?”

“I am looking for better growth opportunities, more challenging database projects, and a role where I can continue improving my technical skills.”

3 How do you handle pressure?

“I handle pressure by prioritizing tasks and focusing on structured problem-solving. When deadlines are tight, I break the work into smaller tasks and ensure timely delivery without compromising data accuracy.”

4 Describe a challenging situation you faced.

“In my current role, I once worked on a slow-performing query that was affecting reporting. I analyzed the execution plan, optimized joins, and suggested indexing improvements. This significantly improved performance and reduced report generation time.”
